Swedish Export Credit Corporation

Update to credit analysis

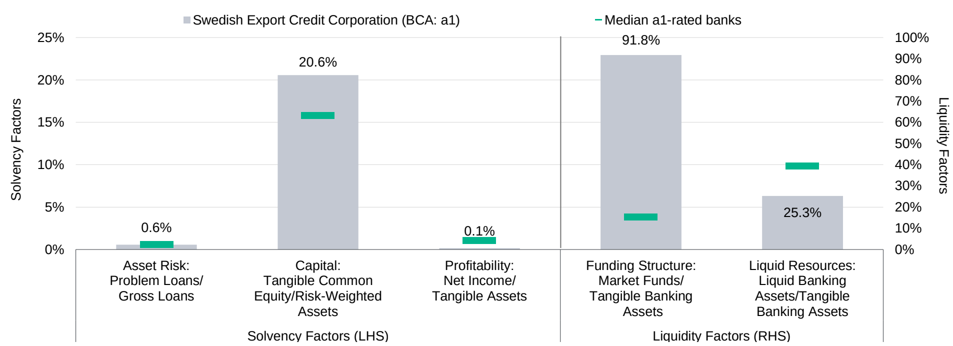
Summary

Swedish Export Credit Corporation's (SEK) long-term senior unsecured ratings of Aa1, with a stable outlook, benefit from a two-notch uplift from its a1 Baseline Credit Assessment (BCA) based on our Advanced Loss Given Failure (LGF) analysis, given the sizeable buffer of loss-absorbing liabilities. We also incorporate a one-notch uplift into SEK's senior unsecured, dated subordinate and junior subordinate ratings to reflect government support. The agency's short-term commercial paper rating is Prime-1 and other short-term rating is (P)Prime-1, Counterparty Risk Ratings (CRRs) are Aa1/Prime-1, and Counterparty Risk (CR) Assessment is Aa1(cr)/Prime-1(cr).

SEK's a1 BCA is supported by its weighted Macro Profile of Strong+, mandate to act as Sweden's export credit agency, strong asset quality and capital position, and stable, although moderate, profitability, as well as its largely match-funded balance sheet.

We expect the global and Swedish economy to contract in 2020 due to lower economic activity caused by the coronavirus. The Swedish authorities policy responses have been comprehensive for businesses and employees, although not entirely offsetting the coronavirus induced drop in growth, which will become more severe the longer the outbreak lasts. In this operating environment, the government has strengthened SEK's ability to support exporting companies with additional credit.

Exhibit 1
Rating Scorecard - Key financial ratios



These represent our Banks methodology scorecard ratios, whereby asset risk and profitability reflect the weaker of either the three-year average or the latest annual figure. The capital ratio is the latest reported figure. Funding structure and liquid resource ratios reflect the latest fiscal year-end figures.
Source: Moody's Financial Metrics

Credit strengths

» Status as a government-owned entity that supports the Swedish export industry

» Good asset quality, benefitting from guarantees and insurance

» Solid capital and stronger-than-peer leverage

» A diversified funding profile and a large liquidity portfolio

» Supportive operating environment, as illustrated by the Strong+ Macro Profile

Credit challenges

» Moderate profitability

» High reliance on wholesale funding, although largely match-funded

Outlook

The outlook on all the long-term ratings is stable, reflecting our expectation that SEK's capitalisation will remain strong, and loan losses limited over the next 12-18 months.

Factors that could lead to an upgrade

» Increasing support from the Government of Sweden (Aaa stable[1]) could prompt upward rating pressure.

» A significant volume of loss-absorbing junior senior unsecured debt could lead to a higher notching for senior debt in the LGF analysis.

Factors that could lead to a downgrade

» Downward pressure on SEK's standalone rating could be triggered by a dilution of its policy mandate to act as Sweden's export credit agency, weaker profitability for an extended period, or a weaker standing in debt capital markets.

Profile

Swedish Export Credit Corporation (SEK) is a credit institution that provides long-term financial solutions to the Swedish export sector. As of 31 March 2020, SEK reported total consolidated assets of SEK365.9 billion (€33 billion).

SEK has a mandate from the Swedish government to support the Swedish export industry. The institution delivers on this mandate by lending to Swedish companies that export their products and services (corporate lending). In addition, it lends to foreign buyers of Swedish exports, thus supporting Swedish companies and the economy (end-customer financing).

SEK was established in 1962, under the joint ownership of the state and the Swedish commercial banks, with a mandate of providing long-term credit solutions to Swedish exporters and their customers. SEK is wholly owned by the Swedish government through the Ministry of Enterprise and Innovation.

For more information, please see Swedish Export Credit Corporation's Issuer Profile - Key Facts and Statistics - Q1 March 2020, published on 18 June 2020.

Recent developments

We have revised our growth forecasts downward for 2020 as the coronavirus pandemic is causing an unprecedented shock to the global economy. Business activity will likely have fallen sharply across advanced economies in the first half of 2020, and we project cumulative contractions over 2020 for a substantial number of countries. We now expect real GDP for the global economy to contract in 2020, followed by a recovery in 2021. For Sweden, we expect real GDP to contract in 2020, compared with growth of 1.2% in 2019.

Our outlook for the Swedish banking system remains stable. The expected contraction in 2020 will increase banks' problem loans and add to the pressure on their profitability.

Detailed credit considerations

Status as a government entity that supports the Swedish export industry

SEK is an agency wholly owned by the Swedish government with the mission to support the Swedish export industry by providing both Swedish exporters and their foreign customers with corporate and export lending, structured financing, project financing, trade financing and leasing solutions. SEK does not take deposits and funds these loans by actively borrowing in the global capital markets.

In addition to the government ownership, SEK has further ties with Swedish government: it manages the export credit system on behalf of the government and in line with the Organisation for Economic Co-operation and Development (OECD) rules on state support, and collaborates extensively with Exportkreditnamnden, a Swedish government agency that guaranteed around 38% of SEK's lending as of year-end 2019. Furthermore, SEK benefits from a SEK200 billion borrowing facility with the Swedish National Debt Office, approved by the parliament, which SEK can use to finance the state-supported export financing system, the Commercial Interest Rate Reference System (CIRR). CIRRs allow exporters' clients to be obtain financing at fixed interest rates and the CIRRs are governed by the OECD's Arrangement on Officially Supported Export Credits. The borrowing facility was increased from SEK125 billion during first quarter 2020, and SEK15 billion of which can also be used by the agency to fund other types of lending. All these factors result in our assessment of a high probability of government support for SEK's senior and subordinated debt instruments.

As an agency established with an explicit public-policy mandate, SEK benefits from an entrenched franchise in a niche market. These conditions provide stability to SEK's asset quality, capital and profitability, supporting the agency's ongoing operating performance and resulting in a low risk profile. This feature is reflected in a qualitative positive adjustment of one notch in our scorecard for Business Diversification.

Good asset quality, benefitting from guarantees and insurance despite challenging economic environment

SEK's problem loan ratio has been consistently low, reflecting its good asset quality, strong underwriting and asset guarantees. The ratio improved to 0.56% as of the end of March 2020 from 0.63% as of the end of December 2019.

As of the end of March 2020, SEK's reported outstanding loans grew 11% to SEK242 billion, compared with SEK218 billion as of the end of December 2019, of which 46% were to exporters and 54% to end-customers. The new lending originated in Q1 2020 was more skewed towards Swedish exporters, with around 40% share, while 60% was granted directly to end-customers. Increased lending demand was a result of the coronavirus outbreak and borrowing needs was large among medium-sized companies and their suppliers, and large corporates.

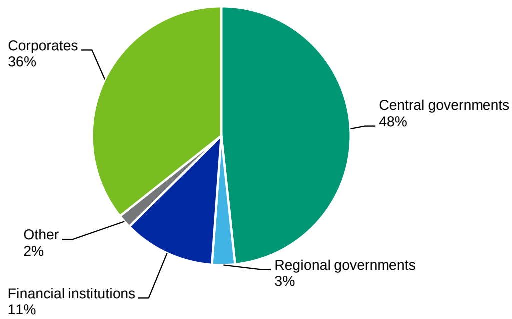
SEK underwrites loans at prevailing fixed or floating market interest rates (65% of its book as of the end of March 2020), as well as loans under the State Support System (the S-system, a state-support credit system, including CIRR, which accounts for the remaining 35% of the book), which is administered on behalf of the state in return for a fixed compensation. Importantly. As of the end of March 2020, 25% of SEK's net credit exposure was outside Sweden, including relatively small exposures in weaker countries such as Italy, Spain and Portugal.

SEK uses various mechanisms to mitigate credit risk under its operations: most importantly, the agency transfers its private-sector borrower credit risk by collaborating with export credit agencies. This results in a high exposure to governments, which consequently represented 48% of SEK's net exposure as of the end of March 2020 (see Exhibit 3). Additionally, SEK uses credit default swaps (CDS) to mitigate credit risk. This effectively transfers credit risk to the CDS counterparty whose creditworthiness could potentially deteriorate. To minimise this credit counterparty risk, SEK has signed Internal Swaps and Derivatives Association (ISDA) agreements and credit support annexes with all counterparties with whom it enters into derivatives contracts. In addition, SEK is working with private insurance companies to militate credit risks.

Exhibit 3

SEK's net exposures as of the end of March 2020

A significant proportion of SEK's net exposures are to regional and central governments



Source: Company reports

Our assigned a1 Asset Risk score reflects SEK's low problem loan ratio and its asset guarantees.

Strong capital and stronger-than-peer leverage

SEK's capital position is strong and its Tier 1 leverage ratio is higher than that of its peers reflected our assigned Capital score of aa2. Large volumes of capital above regulatory limits enables the bank to increase its balance sheet considerably. In its role as promoter of Swedish exports, we would expect the balance sheet to increase during the current coronavirus-induced crisis, ensuring that Swedish exporters have continued access to credit.

SEK reported Common Equity Tier 1 (CET1) capital and total capital ratios of 19.9% as of the end of March 2020, lower than the 20.6% as of end of year 2019 due to balance sheet growth. The CET1 and total capital ratio requirements as of the end of first quarter 2020 were 10.1% and 15.0%, respectively, leading to a solid capacity of 980 basis points (bps) for the bank's CET1 ratio and 490 bps for its total capital ratio as of the end of March 2020. SEK's capital target is to exceed the SFSA requirements for the total capital ratio by two to four percentage points and for the CET1 ratio by four percentage points.

SEK's tangible common equity to risk-weighted assets ratio declined slightly to 20.6% as of the end of March 2020 (21.6% as of the end of December 2019). SEK's dividend policy is a 30% ordinary payment of the annual profit, although the dividend for 2020 has been cancelled following the outbreak of the coronavirus, in accordance with supervisor's guidance.

SEK reported a 5.4% Tier 1 leverage ratio as of the end of March 2020, equivalent to Moody's-adjusted tangible common equity/ tangible assets of 5.4% as of the same date. This places SEK in a stronger position than its Nordic public-sector peers such as Kommuninvest i Sverige Aktiebolag (Aaa stable)[2], Municipality Finance Plc (Aa1 stable) and Kommunalbanken AS (Aaa stable), which currently report leverage ratios ranging between 1.6% and 4.0%.

Lower profitability despite increased lending volumes

SEK reported an operating profit of SEK157 million for the first three months of 2020, a significant decrease from SEK352 million for the same period in 2019. The decrease was driven by lower net results of financial transactions because of changes in market values as well as an increase in the provision for expected credit losses.

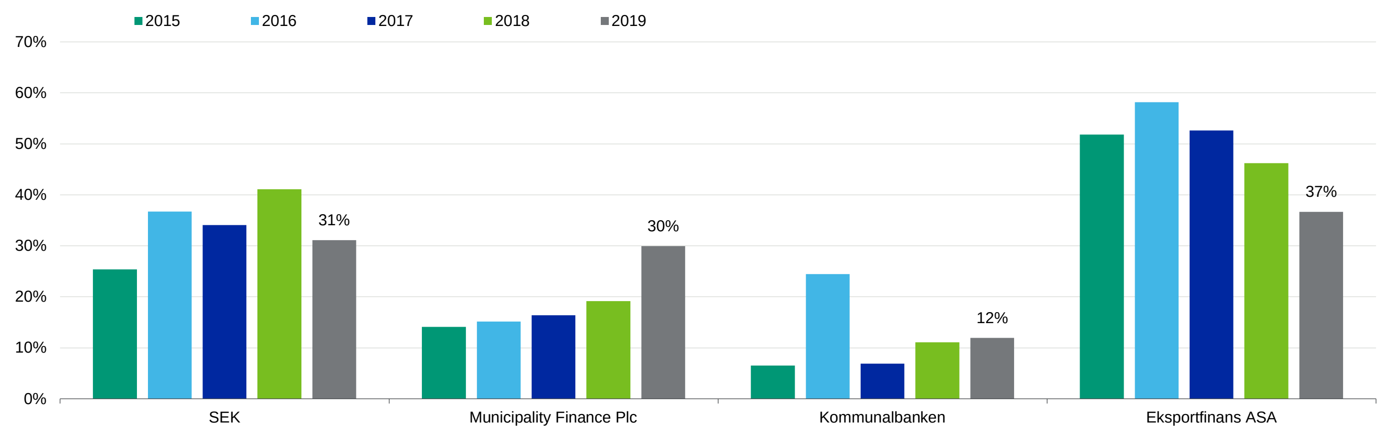
Net interest income was SEK1,250 million for the first three months of 2020, 21% lower than the year-earlier period (Q1 2019: SEK1,578 million). Net results of financial transactions declined to SEK67 million in the first three months of 2020 (Q1 2019: SEK105 million), mainly because of a decrease in the valuation of bonds in the liquidity investment portfolios, increased credit value adjustments as the market price for counterparty risk increased, and increased overnight index swap adjustments owing to wider spreads between the federal funds rate and the three-month US dollar LIBOR.

The bank's loan loss provisions increased to SEK24 million in the first quarter 2020 from SEK9 million in first quarter 2019, due to increased provisioning of Stage 1 exposures by SEK17 million and Stage 2 exposures by SEK7 million, as a result of deteriorating operating environment. There were no Stage 3 provisions during the first quarter 2020. Net interest income benefited from a lower resolution fee (SEK26 million for the first three months of 2020, compared with SEK41 million in the year-earlier period and SEK70 million for same period in 2018). Further, a weaker Swedish krona and higher lending volumes offset lower returns from the higher volume of liquidity coverage ratio (LCR) assets bearing near zero interest rates and higher borrowing costs. As a result, the reported return on equity (ROE) deteriorated to 2.6% for the first three months of 2020 from 5.9% a year earlier. SEK targets a long-term 6% ROE unlike other Nordic government-related entities such as Kommuninvest i Sverige Aktiebolag and Municipality Finance Plc, who do not have profitability targets.

Overall, we assess the profitability of SEK as moderate. SEK's annualised net interest margin declined to 53 bps in the three months ended March 2020 (55 bps in Q1 2019) from 62 bps as of the end of December 2017; however, it is still higher than that of some of the previously mentioned government-related issuers that operate under a not-for-profit mandate. SEK has a track record of earnings stability, which we believe is driven by its mandate and stable business model and is unlikely to change in the future. SEK's Moody's-adjusted cost-to-income ratio of 45.3% for the first three months of 2020 deteriorated from 29.9% in the same period in 2019 (year-end 2019: 31.1%) due to lower operating profit.

Exhibit 4

SEK's cost-to-income ratio compared with that of its peers



Source: Moody's Investors Service

We expect SEK's profitability to be affected by the outbreak of the coronavirus in 2020 through higher unrealised losses on the securities and lending portfolio.

Our assigned ba2 Profitability score captures SEK's stable, although moderate, profitability.

A diversified funding profile and a large liquidity portfolio

SEK has a high reliance on wholesale funding, although mitigated by its largely matched funding, funding diversification, consolidated track record of market access and large liquidity portfolio. SEK's risk appetite ensures a diversified funding profile to fund all credit commitments through maturity, and adequate liquidity investments for new lending even during times of financial stress.

As of the end of March 2020, SEK reported outstanding debt (including borrowing from credit institutions, and senior unsecured and subordinated debt) of SEK313 billion, or 85% of its balance sheet. This high reliance on confidence-sensitive funding is mitigated by funding diversification (virtually all long-term funding is issued in foreign currencies, with the largest concentration in US dollars, about 71%, followed by the Japanese yen at 12%, as of the end of March 2020) and a strong track record of market access (SEK's balance sheet grew during 2008-09, unlike many other financial institutions that lacked access to the debt capital markets). Refinancing risks are very low as assets and liabilities are matched both by maturity and in the terms of currencies, directly or through the use of derivatives.

SEK is considered systemically important and, therefore, needs to fulfill the recapitalisation amount of the minimum requirement of own funds and eligible liabilities with debt subordinated to senior unsecured debt by 2024. However, the implementation of the updated European Union (EU) Bank Resolution and Recovery Directive (BRRD), which we expect to be finalised by year-end 2020, could prompt banks to reduce their senior non-preferred issuance volume as they will be allowed to use surplus capital instruments to meet requirements. The bank has not issued any senior non-preferred debt to date. According to our estimates, based on March 2020 figures, the required volume of senior non-preferred debt is around SEK11 billion, which is small relative to the overall senior issuances. Therefore, our assessment is that SEK will be able to issue the necessary amounts ahead of 2024.

SEK reported liquidity investments of SEK57.7 billion as of the end of March 2020, a decrease from SEK63.6 billion as year-end 2019. The agency also reported a strong LCR of 681% as of the end of March 2020, compared with 620% as of the year-end 2019.

Our a3 combined Liquidity score incorporates SEK's high reliance on wholesale funding, although mitigated by its largely matched funding, funding diversification, consolidated track record of market access and large liquidity portfolio.

Supportive operating environment, as expressed by a Strong+ Macro Profile

We assess that SEK's Macro Profile reflects the average Macro Profile of the countries in which the institution has its net exposures (after taking guarantees and credit derivatives into consideration). SEK's combined Strong+ Macro Profile is in line with that of Sweden (see Sweden's Macro Profile: Strong+, published on 7 October 2019), where the institution had around 75% of its net exposures as of the end of March 2020. The remaining exposures are mostly towards other European countries for which the combined Macro Profile is Strong.

Environmental, social and governance considerations

In line with our general view for the banking sector, SEK has a low exposure to environmental risks and moderate exposure to social risks. Furthermore, as government owned entity, SEK has strict guidance relating to environmental issues, and for example, does not permit lending to coal-fired power. SEK's policy is to refrain from participating in transactions for which the environmental impact is deemed unacceptable and inconsistent with international guidelines. See our environmental and social risk heat maps for further information.

The most relevant social risks for banks arise from the way they interact with their customers. Social risks are particularly high in the area of data security and customer privacy, which are mitigated by sizeable technology investments and banks' long track record of handling sensitive client data. Fines and reputational damage because of product mis-selling or other types of misconduct are a further social risk. SEK conducts separate sustainability reviews for project-related financing in line with OECD's Common Approaches for Officially Supported Export Credits and Environmental and Social Due Diligence based on the sustainability standards of the International Finance Corporation as well as the Equator Principles. Other social risks in terms of customer relations or change in consumer preferences, which are generally relevant for the banking industry, are less important for SEK, given that the bank does not engage in retail activities. Overall, we believe banks, including SEK, face moderate social risks.

The widening spread of the coronavirus outbreak, the deteriorating global economic outlook, falling oil prices, and asset price declines are creating a severe and extensive credit shock across many sectors, regions and markets. The combined credit effects of these developments are unprecedented. We further regard the coronavirus outbreak as a social risk under our ESG framework, given the substantial implications for public health and safety.

Governance is highly relevant for SEK, as it is for all participants in the banking industry. Corporate governance weaknesses can lead to a deterioration in a company's credit quality, while governance strengths can benefit its credit profile. Governance risks are largely internal rather than externally driven. Although we do not have any particular concern around SEK's corporate governance, which is regulated by law and influenced by its public ownership structure, it remains a key credit consideration and requires ongoing monitoring.

Source of facts and figures cited in this report

Unless noted otherwise, the bank-specific figures originate from bank's reports and Moody's Banking Financial Metrics. All figures are based on our own chart of accounts and may be adjusted for analytical purposes. Please refer to the document Financial Statement Adjustments in the Analysis of Financial Institutions, published on 9 August 2018.

Support and structural considerations

Loss Given Failure (LGF) analysis

We apply our Advanced LGF analysis on SEK because the institution is subject to the EU BRRD, which we consider an Operational Resolution Regime. For this analysis, we assume that equity and losses stand at 3% and 8%, respectively, of tangible banking assets in a failure scenario.

Under this analysis, SEK's senior unsecured creditors benefit from a two-notch rating uplift from the a1 BCA, because all of the agency's liabilities are eligible for bail-in, assuming a currently unlikely stress scenario. SEK's subordinated and junior subordinated debt are positioned at the BCA level and one notch below the BCA, respectively.

Government support considerations

SEK's senior debt instruments continue to benefit from high government support, given its strong links with the sovereign because of its government ownership, as well as the special mandate that the bank has to promote Swedish exports and manage the CIRR system. We incorporate a one-notch uplift into its senior unsecured obligations, resulting in Aa1 senior unsecured ratings. We also incorporate a one-notch uplift into the subordinated and junior subordinated ratings, reflecting moderate government support, which reflects the importance of the company to the Swedish economy and the reputational damage to the state if any payment obligations would not be fulfilled, resulting in (P)A1 subordinated and (P)A2 junior subordinated ratings.

Counterparty Risk Ratings (CRRs)

CRRs are opinions of the ability of entities to honour the uncollateralised portion of non-debt counterparty financial liabilities (CRR liabilities) and also reflect the expected financial losses in the event such liabilities are not honoured. CRR liabilities typically relate to transactions with unrelated parties. Examples of CRR liabilities include the uncollateralised portion of payables arising from derivatives transactions and the uncollateralised portion of liabilities under sale and repurchase agreements. CRRs are not applicable to funding commitments or other obligations associated with covered bonds, letters of credit, guarantees, servicer and trustee obligations, and other similar obligations that arise from a bank performing its essential operating functions.

The CRRs of SEK are positioned at Aa1/Prime-1

The CRRs are positioned three notches above SEK's Adjusted BCA of a1, reflecting extremely low loss given failure from the high volume of instruments that are subordinated to CRR liabilities.

Counterparty Risk (CR) Assessment

The CR Assessment is an opinion of the counterparty risk related to a bank's covered bonds, contractual performance obligations (servicing), derivatives (for example, swaps), letters of credit, and liquidity facilities. The CR Assessments are distinct from debt and deposit ratings in that they consider only the risk of default rather than both the likelihood of default and the expected financial loss suffered in the event of default.

The CR Assessment of SEK is positioned at Aa1(cr)/Prime-1(cr)

The CR Assessment is positioned three notches above the a1 BCA, based on the buffer against default provided by senior unsecured and subordinated debt.

Methodology and scorecard

About Moody's Bank Scorecard

Our scorecard is designed to capture, express and explain in summary form our Rating Committee's judgement. When read in conjunction with our research, a fulsome presentation of our judgement is expressed. As a result, the output of our scorecard may materially differ from that suggested by raw data alone (though it has been calibrated to avoid the frequent need for strong divergence). The scorecard output and the individual scores are discussed in rating committees and may be adjusted up or down to reflect conditions specific to each rated entity.
